30th Anniversary Monoblocks

At Genesis, we are primarily loudspeaker designers and builders. However, the loudspeaker is at the end of the audio chain, and at the mercy of everything else in the system. Hence, when we needed an amplifier to drive our speakers in the development lab, we designed our own.

The brief was very simple: a load invariant, high-current, wide-bandwidth amplifier that would let the musical performance come to life with all its emotion, tone and timbre preserved with *Absolute Fidelity*[®].

As a reference amplifier for development, it had to be extremely transparent with no sonic signature of its own. As an amplifier that our music-loving designers would spend hours listening to daily, it had to be effortless, musical, and a pleasure to listen to, “delivering on the deepest emotional chords of the music”.

The first generation of the Genesis Reference Amplifier received universal acclaim from all who heard them. Frederic Beudot of 6 Moons called it “unconditional Reference Performance in a high-power Class D amplifier”. They set the benchmark and established Class D as a musical amplification class even for tube lovers and Class A amplifier lovers. Other owners loved their musicality and how their efficiency and cool-running helped the planet.

The second generation of the Genesis Reference Amplifier further improved upon the musical performance. For Genesis’ 30th Anniversary, we present the ultimate expression of the Genesis Reference Amplifier – the limited edition 30th Anniversary Monoblocks.

As a limited edition product, we elected not to take it so close to the edge, running further below component limits with a lower maximum output power than the original designs for potentially longer life. The latest improvements create an even deeper “black” between notes. The limited edition Genesis 30th Anniversary Monoblocks are more effortless, has a wider soundstage, and greater clarity than even the second generation Reference Monoblocks.

We expect this amplifier to last us the rest of our lives!

SPECIFICATIONS

Genesis Advanced Technologies Reference Amplifier

Frequency Response	10Hz to 50kHz +0db/-3dB
Power Bandwidth	18Hz to 40kHz
Output Power @ 4 ohm	680 watts
Distortion (20Hz to 40kHz)	0.015%
Input Impedance (balanced)	100k Ohm
Damping @ 4 ohm	2,000 min
Peak Output Current	limited to 20 amps after 40ms
Inputs	XLR and RCA
Outputs	WBT-0708 NextGen™
Dimensions & Weights	
	Amplification module: 18.5" W x 5" H x 14" D, 28lb 470mm x 123mm x 356mm, 13kg
	Power module: 9" W x 4.5" H x 12" D, 30lb 228mm x 114mm x 228mm, 13.5kg

*Specifications *may* change without notice
